PRIMARY EXAMINER

Allowable Subject Matter

1. Claims 1-19 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach a network analyzer comprising a memory storing information associating with transmit frequencies and receive frequencies; receiver means receiving at least one operating one of the transmit frequencies; a source generating a source signal including one or more of the receive frequencies; a processor operatively connected to the memory, the receiver means and the source, the processor receiving the at least one operating transmit frequency, accessing the memory to determine at least one operating one of the receive frequencies associated with the at least one operating transmit frequency and instructing the source to avoid inclusion of the at least one operating receive frequency within the source signal, as substantially described in independent claims 1 and 10. These limitations, in combination with the remaining limitations of claims 1 and 10, are not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Roos (4,758,775), Bracht et al (6,329,805) and Majidi-Ahy et al (5,003,253) teach network analyzers.
